
Silver Springs Army Complex Storage Building and Elevator Milwaukee, Wisconsin

Project Description

PGI performed a subsurface exploration in order to obtain information for design and construction of a proposed storage building and an elevator addition to an existing building at Silver Springs Army Reserve Center in Milwaukee, Wisconsin. A local drilling company was contracted to perform the drilling operations under the supervision of our project manager. The test boring and sampling program consisted of advancing a total of three (3) test borings to depths ranging from 20 to 26 feet, conducting field tests, sampling the subsurface materials, and preparing field logs. The testing program included performing soil classification and engineering properties tests on selected samples and classifying the soils in accordance with the Unified Soil Classification System.

Client:
CELRL-ED-MA
(USACE Louisville District)

Contact:
Mr. Raymond E. Frye, Jr., P.E.
(502) 315-3684

Performance Period:
July 2007 to August 2007

Project Costs:
\$11,606

PGI's Role:
Geotechnical Exploration
